

Kreg Precision Beaded Face-Frame Bits

Specialized router bits specifically for use with the Precision Beaded Face-Frame System. These bits are manufactured with 1/2" shanks and high grade carbide tips for durability. For each beaded profile, a beading bit and a notching bit are needed to complete the shaping and notching of the beaded face frame joint. Notching bits are available in 1 1/2" and 2" sizes to allow one pass operations* in 1 1/2" and 2" wide rails and stiles. The following list describes each bit and the partner bit required;

*For material widths greater than 2", multiple passes using either the PRS4200 or PRS4205 are required.
NOTE: The PRS4250 and PRS4200 come standard with the Precision Beaded Face-Frame System (PRS1200).

1/4" PRECISION BEADED FACE-FRAME BIT SPECIFICATIONS

1/4" Standard Beading Bit

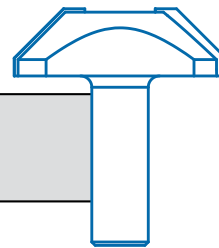

- Notching bits required – PRS4200 or PRS4205
- Used for cutting 1/4" deep beaded profiles.
- This is the replacement bit for the 1/4" Beading Bit that comes standard with the Kreg Precision Beaded Face Frame System.

Item#..... **PRS4250**
 US MSRP \$34.99

1/4" x 1 1/2" Notching Bit

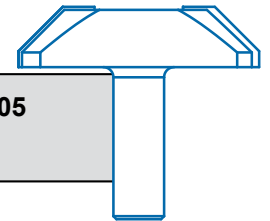

- Beading bit required – PRS4250
- Provides a one pass operation for cutting the notch in 1 1/2" wide rails and stiles for beaded face frame assemblies.
- This is the replacement bit for the 1/4" x 1 1/2" Notching Bit that comes standard with the Kreg Precision Beaded Face Frame System.

Item#..... **PRS4200**
 US MSRP \$54.99

1/4" x 2" Notching Bit

- Beading bit required – PRS4250
- Provides a one pass operation for cutting the notch in 2" wide rails and stiles for beaded face frame assemblies.

Item#..... **PRS4205**
 US MSRP \$59.99

These 3/8" beaded profiles require a 3/8" deep notch that is only achieved with the 3/8" notching bits. Two different profiles are available for these notching bits;

- 3/8" x 1-1/2" for rails and stiles that are a minimum of 1-1/2" wide
- 3/8" x 2" for rails and stiles that are a minimum of 2" wide

For rails and stiles wider than the minimum, multiple passes will be required. For each beaded profile, both a beading bit and a notching bit are needed.
